This statement is intended to meet Standard # 10 of the Storm Water Management Guide

The City of New Bedford through the Department of Public Infrastructure has prepared a design for a salt shed facility to be constructed at the site of 1484 Airport Road. The facility includes a storm water retention swale surrounding three sides of the proposed salt shed.

Access to the swale is limited and restricted to small tractor mowing equipment. Except for the potential for a deliberate criminal act of discharge by an unauthorized entity for which the City has no control, there are to be no illicit discharges into the retention swale either from the salt shed or from outside sources.
