B. Fees

Fee should be calculated using the following process & worksheet. **Please see instructions before filling out worksheet.**

Step 1/Type of Activity: Describe each type of activity that will occur in wetland resource area and buffer zone.

Step 2/Number of Activities: Identify the number of each type of activity.

Step 3/Individual Activity Fee: Identify each activity fee from the six project categories listed in the instructions.

Step 4/Subtotal Activity Fee: Multiply the number of activities (identified in Step 2) times the fee per category (identified in Step 3) to reach a subtotal fee amount. Note: If any of these activities are in a Riverfront Area in addition to another Resource Area or the Buffer Zone, the fee per activity should be multiplied by 1.5 and then added to the subtotal amount.

Step 5/Total Project Fee: Determine the total project fee by adding the subtotal amounts from Step 4.

Step 6/Fee Payments: To calculate the state share of the fee, divide the total fee in half and subtract \$12.50. To calculate the city/town share of the fee, divide the total fee in half and add \$12.50.

**Project Description and Alternatives Evaluation for Notice of Intent (NOI)
Keith Middle School Cap Slope Clearing
225 Hathaway Blvd., New Bedford, MA
MADEP Release Tracking Number (RTN): 4-15685**

I. Proposed Project

This NOI covers the clearance of woody and herbaceous vegetation on the slope of the Keith Middle School (KMS) Remedial Cap to the east of the wetland using mowers and hand held equipment. The KMS cap was constructed as part of a risk based Polychlorinated Biphenyl (PCB) cleanup under the Toxic Substances Control Act (TSCA) and is subject to a Long Term Monitoring and Maintenance Plan approved by the US Environmental Protection Agency (USEPA) during the implementation of the cleanup. The roughly 25 foot wide cap slope extends from the wetland to the west of the KMS up to a fence separating it from the parking lot and landscaped areas associated with the middle school. The attached photographs demonstrate the clear visual delineation between the cap slope and the wetland.

The long term maintenance plan for the cap requires the regular removal of deep rooted woody vegetation and shrubs from the cap slope. Trees and Japanese Knotweed have become established on the slopes since the last vegetation control efforts were carried out using pesticides in 2013. Subsequent inspections of the cap have indicated that the herbicide treatment was not sufficient to substantially inhibit the growth of . Periodic clearing of the vegetation using physical means is likely to be more effective. An ongoing condition is sought so that this maintenance work may be conducted on an annual basis.

II. Stormwater Management

The Stormwater Management Standards listed in 310 CMR 10.05(6)(k-q) are applicable to projects that involve the creation of areas with impervious surfaces. The standards do not directly address conditions that will be associated with this project. A brief summary of the standards and their applicability to the project is presented below:

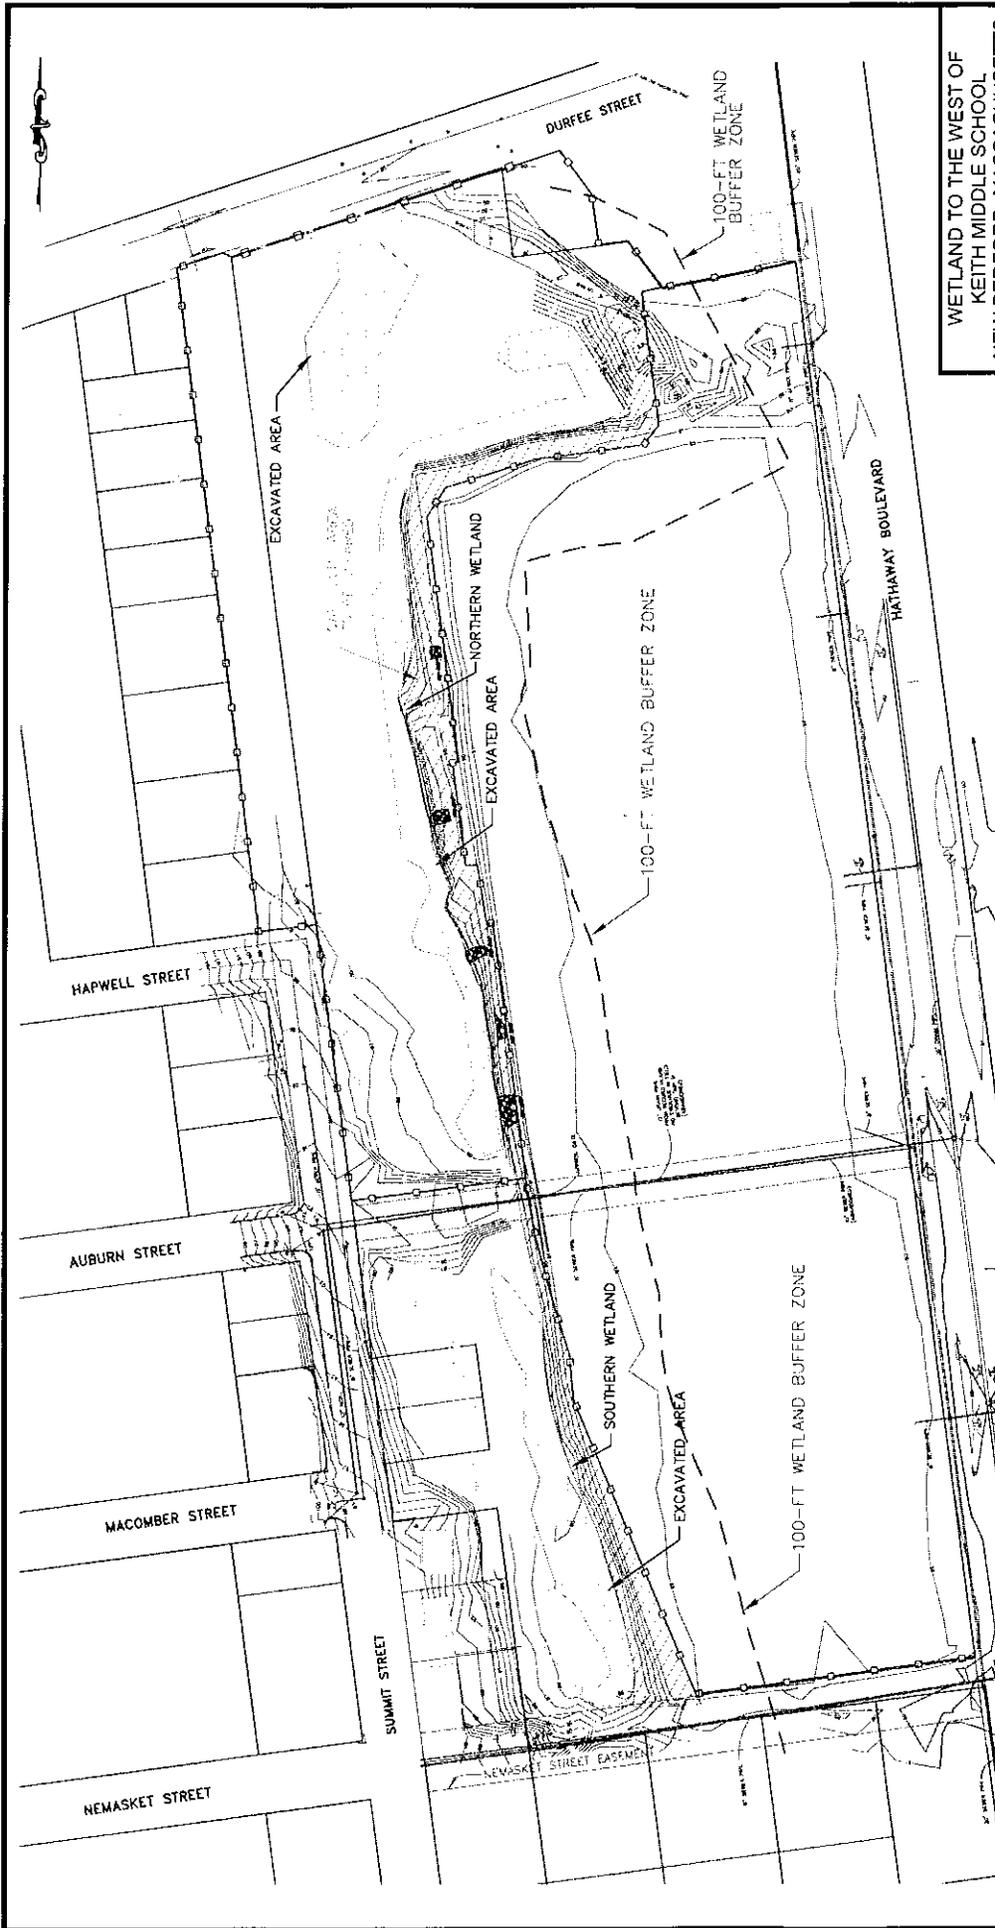

- 1.) **No new stormwater conveyances (e.g. outfalls) may discharge untreated stormwater directly to or cause erosion in wetlands or waters of the Commonwealth.** This project will not involve the installation of stormwater conveyances.
- 2.) **Stormwater management systems shall be designed so that post-development peak discharge rates do not exceed pre-development peak discharge rates.** No stormwater management systems will be designed as part of this project.
- 3.) **Loss of annual recharge to ground water shall be eliminated or minimized.** This project will not affect recharge to groundwater as impervious surfaces above the tanks are replaced with fill soil.
- 4.) **Stormwater management systems shall be designed to remove 80% of the average annual**

post-construction load of Total Suspended Solids (TSS). No stormwater management systems will be designed as part of this project.

- 5.) For land uses with higher potential pollutant loads, source control and pollution prevention shall be implemented in accordance with the Massachusetts Stormwater Handbook to eliminate or reduce the discharge of stormwater runoff from such land uses to the maximum extent practicable.** Source control and pollution prevention measures will be implemented to the maximum practicable extent
- 6.) Stormwater discharges within the Zone II or Interim Wellhead Protection Area of a public water supply and stormwater discharges near or to any other critical area require the use of the specific source control and pollution prevention measures and the specific structural stormwater best management practices.** This project will not involve any new stormwater discharges.
- 7.) A redevelopment project is required to meet the following Stormwater Management Standards only to the maximum extent practicable.** No redevelopment is planned during this project.
- 8.) A plan to control construction related impacts including erosion, sedimentation and other pollutant sources during construction and land disturbance activities (construction period erosion, sedimentation and pollution prevention plan) shall be developed and implemented.** No construction, excavation or any areas of disturbed soil are anticipated as part of this project.
- 9.) A long-term operation and maintenance plan shall be developed and implemented to ensure that the stormwater management system functions as designed.** A long term operation and maintenance plans will not be required as no new stormwater conveyances will be installed.
- 10.) All illicit discharges to the stormwater management system are prohibited.** The proposed project will not create discharges to stormwater management systems.
