RE: Immediate Response Action (IRA) Completion Report and Imminent Hazard Evaluation – Soccer Field Soil Removal
Dr. Paul F. Walsh Memorial Field
Parker and Hunter Streets
New Bedford, Massachusetts
Release Tracking Number (RTN) 4-21823

To Whom It May Concern:

Consistent with the requirements of the Massachusetts Contingency Plan (MCP; 310 CMR 40.0000), specifically 310 CMR 40.0427, attached please find an Immediate Response Action (IRA) Completion Report for the above-referenced IRA condition in New Bedford, Massachusetts.

If you have any questions concerning the IRA Completion Report or transmittal forms, please do not hesitate to contact me at 978-656-3565 or via e-mail at dsullivan@trcsolutions.com.

Sincerely,

David M. Sullivan, LSP, CHMM
Senior Project Manager

Immediate Response Action Completion Report
and
Imminent Hazard Evaluation

Soccer Field Soil Removal

Dr. Paul F. Walsh Memorial Field
Parker and Hunter Streets
New Bedford, Massachusetts

Release Tracking Number 4-21823

TRC Project Number: 115058

August 17, 2009

TRC Environmental Corporation (TRC) is submitting this Immediate Response Action Completion Report (IRA Completion Report) to the Massachusetts Department of Environmental Protection (MassDEP) on behalf of the City of New Bedford (City). This IRA Completion Report addresses the risk reduction measures that have been completed by the City at the Dr. Paul F. Walsh Memorial Field (Walsh Field) property located adjacent to the intersection of Parker and Hunter Streets in New Bedford, Massachusetts, specifically relative to the Soccer Field (the "Site"). Release Tracking Number (RTN) 4-21823 has been assigned to the Site, and is related to an Imminent Hazard (IH) condition associated with the Soccer Field that triggered a 2-hour regulatory reporting obligation to the MassDEP in accordance with 310 CMR 40.0321(2) and 310 CMR 40.0311(7). The IH-related reporting condition is associated with the concentration, depth below surface, proximity to a school or residential dwelling, and accessibility of the soil samples containing lead at a concentration above a calculated IH evaluation threshold. The IH condition was reported to the MassDEP by TRC via telephone, in conjunction with the City, on March 4, 2009. MassDEP orally approved IRA assessment and removal activities at the Site, and assigned RTN 4-21823. The Site is part of the larger Parker Street Waste Site (PSWS) that is tracked by MassDEP under RTN 4-15685.

This IRA Completion Report is organized as follows: Section I (Background) briefly summarizes information on TRC's involvement with the Site and the circumstances associated with the detection of the release condition; Section II (IRA Completion Report) provides the information required for an IRA Completion Report under the MCP, specifically 310 CMR 40.0427; Section III (References) lists information sources relied upon in the preparation of this IRA Completion Report. In addition, Appendix A provides the Imminent Hazard Evaluation, Appendix B provides the soil sample laboratory analytical results, Appendix C provides the dust monitoring results, Appendix D contains copies of the Bill of Lading forms, Appendix E contains copies of notifications to the City of New Bedford Mayor and Board of Health, and Appendix F contains pertinent soil boring logs.

I. BACKGROUND

Introduction

In February 2006, soil sampling was conducted at Walsh Field in New Bedford, Massachusetts (Figure 1) by BETA Group, Incorporated (BETA) of Norwood, Massachusetts as part of an investigation of the PSWS, which includes Walsh Field (BETA, 2006). The results of the sampling were examined by TRC as part of an ongoing environmental investigation of the PSWS. The WFE-5 sampling location was identified as one of two areas requiring further delineation sampling to support remedial planning in the Soccer Field area. Soil sample results for BETA soil boring WFE-5 (1.75 to 2.5 feet below ground surface [bgs]) indicated cadmium and lead at concentrations in excess of applicable S-1 Method 1 soil cleanup standards.

The "could pose" IH condition was discovered during the additional investigation to delineate the extent of previously detected concentrations of lead, cadmium and polycyclic aromatic hydrocarbons (PAHs) in soil at the Soccer Field area and to determine the extent of potential soil removal necessary to achieve a condition of no significant risk for the top three feet of soil within this area.

The contamination at WFE-5 and the rest of Walsh Field subsurface contamination is associated with historical landfilling activities. Boring logs indicate the presence of fill material containing ash, glass, and clinkers. The contaminated fill at Walsh Field is associated with the Parker Street Waste Site (PSWS) that is tracked under RTN 4-15685.

Soil samples (0-1 and 1-3 feet below grade) collected from the Site by TRC during this phase of investigation contained total lead at a concentration posing an IH under 310 CMR 40.0993(6). The IH-related release condition was reported to the MassDEP by TRC via telephone, in conjunction with representatives of the City, on March 4, 2009. MassDEP orally approved IRA assessment and removal activities and assigned RTN 4-21823. Follow-up work completed as part of the approved IRA activities included analysis of additional soil samples to delineate the extent of elevated lead concentrations in the soil, preparation of an IH evaluation and removal of lead contaminated soil. The IH evaluation concluded that an IH condition was present at the Site. The objectives of TRC's IRA Plan (TRC, 2009a) were:

1. Collection of supplemental soil samples to delineate the extent of soils containing lead;
2. Preparation of an IH evaluation;
3. Removal of lead-contaminated surface soil to a depth of three (3) feet within the area defined by pre-excavation soil sampling as a risk reduction measure;
4. Replacement of the removed soil with contaminant-free stone dust and loam;
5. Ex-situ treatment of the excavated soil in order to facilitate reuse/disposal; and
6. Transportation of remediation waste to an appropriate disposal/recycling facility.

This IRA Completion Report documents soil excavation activities undertaken to remove the lead contaminated soil from the WFE-5 area of Walsh Field and the subsequent transport of the soil to the Crapo Hill Landfill in New Bedford, Massachusetts.

Summary of Work

On February 23, 2009, TRC conducted soil sampling at the Soccer Field area of Walsh Field to delineate the extent of previously detected concentrations of lead, cadmium and PAHs in soil and to support remedial planning in this area. This work was conducted to address data gaps identified in the delineation of the PSWS.

TRC's environmental investigation consisted of direct push soil borings using a truck-mounted drill rig to sample soil and observe subsurface soil conditions. Drilling services and equipment were provided by New England Geotech, LLC (New England Geotech) of Jamestown, Rhode Island. TRC completed a total of eight (8) soil borings and collected a total of sixteen (16) soil samples (plus one laboratory duplicate) on February 23, 2009. Boring logs are included in Appendix F.

The protocol for the delineation sampling called for the collection of four "inner ring" soil samples (0-1 foot and 1-3 feet in depth) four feet away from the original WFE-5 sampling location at points to the north, east, south and west (designated "A" through "D", respectively; see Figure 2). The protocol further called for the collection of four additional "outer ring" samples eight feet from the original WFE-5 sampling location (designated "E" through "H") that would be authorized for analysis at the laboratory as needed to delineate the contamination. "Outer ring" samples were also collected from the 0-1 and 1-feet intervals also at points to the north, east, south and west. All samples were collected on February 23, 2009 and the "inner ring" samples were authorized for lead, cadmium and PAH analysis. The "outer ring" samples were held at the laboratory, pending the results of the "inner ring" sample analysis.

Cadmium and PAH concentrations in the four "inner ring" surface soil samples were below the natural background concentrations of chemicals in soil in Massachusetts established by MassDEP. Lead concentrations were below the MCP Method 1 S-1/GW-2 and S-1/GW-3 soil cleanup standards (300 mg/kg) at three of the four "inner ring" surface soil locations (WFE5-B through WFE5-D). However, at location WFE5-A, a concentration of 3,360 mg/kg was detected in the 0 to 1 foot interval. Due to the detection of lead at a concentration more than 10-fold the MCP Method 1 S-1 soil cleanup standard and in excess of the MCP Upper Concentration Limit (UCL) at the WFE-5A location, TRC was prompted to performed a preliminary IH analysis as a precaution. TRC determined than an IH condition was present using MassDEP risk characterization protocols. The IH condition was reported to MassDEP and the "outer ring" samples were immediately authorized for analysis to determine the extent of the elevated surficial lead.

Lead concentrations in 0-1 foot samples WFE5-E through WFE5-H, reported by the laboratory on March 6, 2009, were less than the MCP Method 1 S-1 soil cleanup standard of 300 mg/kg, with a maximum detected concentration of 220 mg/kg. Four additional locations were sampled

to the north of WFE5-E at two foot step-out intervals (WFE5-I through WFE5-L) on March 11, 2009, primarily to delineate lead in the 1 to 3 foot interval. Boring logs are included in Appendix F. The lead concentrations in the four 0-1 foot samples were also below MCP Method 1 S-1 soil cleanup standards, confirming that the extent of the surficial lead had been delineated. As noted in the IH evaluation for the Soccer Field area in Appendix A, the estimated cancer risk for the young child recreational user did not exceed the MCP risk limits for an IH of an excess lifetime cancer risk (ELCR) of 1E-05. However, the noncarcinogenic hazard quotient of 20 exceeded the MCP hazard index (HI) of 1 for lead. The IH was identified at the Soccer Field area primarily due to the exposure pathway of the ingestion of lead-containing surface soil.

Summary of Analytical Results Indicating a Imminent Hazard

The WFE-5 sampling location had been identified as an area requiring further delineation sampling within the Soccer Field, based on prior analytical results. The laboratory analytical results for the soil samples collected to delineate documented contamination are summarized in Table 1. The laboratory reports containing the WFE-5 area soil sample analytical results are presented in Appendix B. One soil sample collected on February 23, 2009 at boring WFE-5A from 0-1 foot bgs contained lead at a concentration of 3,360 mg/kg, which prompted a preliminary IH evaluation and regulatory reporting. None of the additional samples analyzed following the observation of the high lead result at WFE-5A contained lead above the TRC calculated IH threshold. TRC's risk characterization determined that the removal of a rectangular area within the Soccer Field area, with approximate dimensions of 23.5 feet (north-south) by 15.1 feet (east-west) by 3 feet deep would be sufficient to address the IH condition and reduce risk. The lateral extent of the excavation area was defined by lead samples WFE-5B to the east, WFE-5G to the south, WFE-5H to the west and WFE-5L to the north (see Figure 3). TRC identified the excavation area to conservatively remove soil contaminated with lead in the vicinity of the IH condition.

II. IRA COMPLETION REPORT (310 CMR 40.0424)

This IRA Completion Report is organized according to the minimum information needs set forth under 310 CMR 40.0427(4)(a) through (f) of the MCP.

(a) Description of Release, Threat of Release, Site Conditions, and Surrounding Receptors

Description of Release/Threat of Release

The MCP RTN associated with the IRA at this Site is 4-21823 and is an IH-related release condition that was identified near BETA soil sample location WFE-5 in the Soccer Field area portion of the Walsh Field athletic complex. This release condition triggered a 2-hour regulatory reporting obligation to the MassDEP in accordance with 310 CMR 40.0321(2) and 310 CMR 40.0311(7). The IH-related release condition was reported to the MassDEP by TRC via telephone, in conjunction with the City, on March 4, 2009. MassDEP orally approved IRA assessment and removal activities and assigned RTN 4-21823.

The Site is located within the PSWS, which is tracked under RTN 4-15685, that includes several residential and municipal properties in the area including the New Bedford High School (NBHS) to the north of the Site. The IH-related reporting condition was discovered during additional investigation to delineate the extent of previously detected concentrations of lead, cadmium and PAHs in soil at the Soccer Field area and to determine the extent of potential soil removal necessary to achieve a condition of no significant risk for the top three feet of soil within this area. The WFE-5 sampling location had been identified as one of two areas requiring further delineation sampling within the soccer field area.

The contamination at WFE-5 and the rest of Walsh Field subsurface contamination is associated with historical landfilling activities. Boring logs included in Appendix F indicate the presence of fill material containing ash, glass, and clinkers. The contaminated fill at Walsh Field is associated with the PSWS tracked under RTN 4-15685.

Site Conditions

The Soccer Field area, located in the northeastern corner of Walsh Field, is located to the southeast of the intersection of Parker and Hunter Streets in New Bedford, Massachusetts (see Figure 1). Topographically, the Site and the surrounding areas are flat.

Surrounding Receptors

Walsh Field lies within 500 feet of residential dwellings and serves as the athletic field for the adjacent NBHS. The Soccer Field area is used for practices and games during the spring, summer, and fall soccer season. The Soccer Field area may also be used by other teams as a practice area during the spring and fall sport seasons (e.g., for field hockey practice). Walsh Field, which houses the soccer field and other athletic fields, is secured by a fence, limiting access only to those with permission to use or maintain the fields.

Groundwater categories at Walsh Field include actual or potential GW-2, depending upon proximity to occupied structures (groundwater is less than 15 feet below ground surface based on data from Walsh Field and from nearby locations), and GW-3, which applies to all groundwater throughout the Commonwealth of Massachusetts. However, groundwater impacts from contaminants associated with WFE-5, or Walsh Field in general, are not expected. For example, recent groundwater monitoring conducted at Walsh Field in March 2009, specifically at TRC monitoring well MW-WFE-5 which is collocated with soil boring WFE-5H (see Figure 3), did not exhibit contaminants above applicable MCP Reportable Concentrations (RCs) (see Appendix B). A monitoring well construction log for MW-WFE-5 is included in Appendix F.

Based on review of on-line MassDEP Priority Resource Map data available from Massachusetts Geographic Information System (MassGIS), the Site is not located within a Current or Potential Drinking Water Source Area (MassGIS, 2008).

Walsh Field is not located in a wetland resource area. No other documented sensitive ecological receptor areas (e.g., Areas of Critical Environmental Concern [ACECs]) are known to be located at or near the site.

(b) Description of any Immediate Response Actions Undertaken to Date at the Site

At the time of oral notification of the release condition on March 4, 2009, MassDEP approved the following response action as an IRA:

- Assessment and monitoring

Later on March 11, 2009, MassDEP provided oral approval for the following risk reduction measure:

- Soil excavation

Imminent Hazard Analysis

Initial assessment included advancement of eight soil borings (i.e., soil borings WFE-5A through WFE-5H) throughout the Site on February 23, 2009. This initial investigation was conducted as part of on-going assessment activities of the PSWS to delineate the extent of previously detected concentrations of lead, cadmium and PAHs in soil and to support remedial planning in this area. During this phase of work, one soil sample was found to contain lead at a concentration above a calculated IH evaluation threshold. Soil sample WFE5-A, collected from 0-1 foot bgs, contained a total lead concentration of 3,360 mg/kg. Lead concentrations were below the Method 1 S-1/GW-2 and S-1/GW-3 standards (300 mg/kg) at the remaining three "inner ring" surface soil locations (WFE5-B through WFE5-D).

Due to the detection of lead at a concentration more than 10-fold the MCP Method 1 S-1 soil cleanup standard and in excess of the MCP UCL at the WFE-5A location, TRC was prompted to performed a preliminary IH analysis as a precaution. TRC determined than an IH condition was present using MassDEP risk characterization protocols. The IH condition was reported and the "outer ring" samples (WFE-5E through WFE-5H) were immediately authorized for analysis to determine the extent of the elevated surficial lead.

Lead concentrations in 0-1 foot samples WFE5-E through WFE5-H, reported by the laboratory on March 6, 2009, were less than the Method 1 S-1 standard of 300 mg/kg, with a maximum detected concentration of 220 mg/kg. Four additional locations were sampled to the north of WFE5-E at two foot step-out intervals (WFE5-I through WFE5-L) on March 11, 2009, primarily to delineate lead in the 1 to 3 foot interval. However, lead concentrations in the four 0-1 foot samples were also below Method 1 S-1 standards, confirming that the extent of the surficial lead had been delineated. Figure 2 presents the sampling locations for the WFE-5 area and corresponding laboratory analytical results.

An IH evaluation, which is provided in Appendix A, was initiated within 14 days of obtaining knowledge of the IH condition. For the WFE-5 area, TRC's risk assessment specialist conducted the IH calculations using the maximum detected concentration (3,360 mg/kg) as the Exposure Point Concentration (EPC) for lead, and also used maximum detected concentrations as EPCs for other contaminants of potential concern such as cadmium and PAHs. TRC also used site-specific exposure assumptions that were more health-protective than used by MassDEP for a park visitor scenario, and default MassDEP toxicity criteria. TRC completed the IH analysis on March 16, 2009, satisfying the IH evaluation initiation timeline under the MCP. The risk assessment calculations indicated an IH existed at the Soccer Field at the time of reporting, but does not exist presently because of the risk reduction measures employed (soil excavation and removal).

Soil Excavation and Removal

Analytical results of soil samples collected in the vicinity of WFE-5A were used in the delineation of an approximate 23.5 foot by 15.1 foot area to be excavated and removed to a depth of three (3) feet (see Figure 3). The lateral extents of the soil excavation area were identified by sample locations evidencing concentrations of lead below the applicable MCP Method 1 S-1 soil cleanup standard. The locations of all TRC sampling points were surveyed by Land Planning, Incorporated of Hanson, Massachusetts (Land Planning). Land Planning field staked TRC's delineation sampling locations prior to excavation to guide soil removal.

Following receipt of verbal approval from MassDEP on March 11, 2009, D. W. White Construction, Incorporated of Acushnet, Massachusetts (DW White) excavated soils in the Soccer Field area that were determined to contain elevated lead concentrations on March 13, 2009. Approximately 41 cubic yards of excavated soils were loaded directly into roll-off containers lined with 10-mil polyethylene sheeting. All soils were excavated up to the staked excavation boundaries and down to 3 feet bgs. The dimensions of the excavation area were intended to be protective of potential soil exposure, consistent with the assumptions in TRC's IH evaluation (see Figure 3).

The excavated area was backfilled on March 13, 2009 using a contaminant-free source (stone dust). Approximately 2.5 vertical feet of stone dust was placed into the open excavation, followed by approximately 0.5 vertical feet of loam which was used to grade the area to the original surface elevation. Future grounds keeping activities are expected at the area to restore turf growth.

During IRA-related contaminated soil excavation and management activities, TRC conducted real-time field screening of dust levels using direct reading instruments that are designed to monitor air quality on a real-time basis at locations upwind and downwind of excavation and soil moving activities. The dust monitoring units were TSI Dustrak™ units with size-selective inlet for particles of 10 micrometers in diameter or less (PM_{10}). The dust monitoring instruments were zeroed before use and at the end of the day. Data was logged at 60-second intervals and monitored periodically by field personnel during IRA-related excavation activities. Data was downloaded daily. The upwind sample was intended to provide a measurement of background ambient dust levels; however, this unit malfunctioned and did not record dust concentrations

throughout the day. There were no exceedances of TRC's prescribed action level of 150 ug/m^3 sustained for 15 minutes, during soil excavation and loading. The fugitive dust monitoring data associated with the WFE-5 area excavation and removal activities are presented in Appendix C.

Waste Characterization Analysis

A composite waste characterization soil sample (WFE-5W) was collected from the excavated soils, and submitted for laboratory analysis of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), total poly-chlorinated biphenyls (PCBs), PAHs, total petroleum hydrocarbons (TPH), and Resource and Conservation Recovery Act (RCRA) 8 metals. Additional volume was collected for Toxicity Characteristic Leaching Procedure (TCLP) metals analysis, contingent upon total metals results. All waste characterization analyses were conducted by Con-Test Analytical Laboratory of East Longmeadow, Massachusetts.

The three lined and covered roll-off containers containing the excavated soils were transported under a MassDEP Bill of Lading (BOL) to the Shawmut Avenue Transfer Station, owned by the City of New Bedford located at 1103 Shawmut Avenue, New Bedford, Massachusetts on March 13, 2009 for temporary storage consistent with 310 CMR 40.0034(4). A copy of the Bill of Lading is provided in Appendix D.

Soil sample WFE-5W exhibited a lead concentration of 655 mg/kg (Table 2). Since this concentration is greater than 20-times the allowable aqueous lead leachate level, the sample was analyzed for TCLP lead. Based on TCLP analysis, the extract from the soil contained a lead concentration of 8.04 mg/L (Table 3). This concentration exceeds the 5.0 mg/L concentration identified as the regulatory level for lead by MassDEP in 310 CMR 30.125: Table 1 (characteristic hazardous waste). As a result, the soil required lead stabilization treatment at the Shawmut Avenue Transfer Station in New Bedford, Massachusetts prior to final offsite management.

IRA Status Report

On July 10, 2009, TRC submitted an IRA Status Report to the MassDEP on behalf of the City in accordance with 310 CMR 40.0425 of the MCP. At that time IRA related activities were complete and no new Site information or data had been generated since submittal of the TRC's May 2009 IRA Plan. However, an IRA completion report could not be filed as the remediation waste had not been treated or disposed of offsite. The IRA Status Report served to outline the plans for management of the remediation waste that followed as detailed in the following sections (TRC, 2009b).

Soil Stockpiling and Treatment

On July 10, 2009 TRC oversaw the unloading and temporary stockpiling of the WFE-5 area soils. The temporary stockpiling was necessary to allow for proper application of the lead stabilization agent. Norman's Enterprises Construction Corporation (Norman's Enterprises) of New Bedford, Massachusetts was contracted by the City to conduct the transfer activities in preparation for soil stabilization treatment. Each of the three lined roll-off containers was

uncovered and sequentially dumped onto individually staged sections of 10-mil polyethylene sheeting. Care was taken to ensure that the polyethylene liner in each roll-off container was not compromised during the dumping activities. Each of the three stockpiles was securely covered with overlapped polyethylene sheeting and weighted to form a continuous waterproof barrier with no seams.

During the soil management activities on July 10, 2009, TRC conducted real-time field screening of dust levels using direct reading instruments consistent with previously described methods employed during soil excavation and removal activities. The upwind and downwind dust monitoring instruments (i.e., TSI Dustrak™) were zeroed before use and at the end of the day. Data was logged at 60-second intervals, monitored periodically by field personnel during soil management activities and the data was downloaded at the end of the day. There were no exceedances of TRC's prescribed action level of 150 ug/m^3 sustained for 15 minutes at the upwind unit during soil management activities. The maximum recorded reading from the upwind unit was 0.017 ug/m^3. The downwind unit exhibited a single spike of 0.499 ug/m^3, however this level was not sustained and represents the only occasion throughout fugitive dust monitoring that the 150 ug/m^3 level was momentarily exceeded. The fugitive dust monitoring data associated with the WFE-5 stockpiling activities are presented in Appendix C.

On July 13, 2009 TRC oversaw the stabilization treatment of the lead-contaminated soil from the WFE-5 area. As previously noted, due to the TCLP concentration in waste characterization sample WFE-5W exceeding the 5.0 mg/L regulatory level for lead, Triumvirate Environmental, Incorporated (Triumvirate) of Somerville, Massachusetts was procured by the City to treat the lead-containing soil with Free Flow Technologies® FF-200 chemical reagent that binds the lead to the soil, thereby inhibiting the leaching of lead from the soil. Triumvirate subcontracted Norman's Enterprises to conduct soil movement activities. The soil material from each of the three stockpiles was sequentially spread onto polyethylene sheeting. The soil material was spread in thin layers, progressively combining the three individual stockpiles into two larger stockpiles, while Triumvirate personnel manually applied the chemical reagent to the soil at the manufacturer recommended ratio and mix the soil and reagent in accordance with manufacturers' instructions. Please refer to TRC's July 2009 IRA Status Report for details on Triumvirate's working agreement for stabilization, transportation and disposal (TRC, 2009b). Following completion of the treatment process, the stockpiles were securely covered with overlapped polyethylene sheeting and weighted to form a continuous waterproof barrier with no seams.

During the soil treatment activities on July 13, 2009, TRC conducted real-time field screening of dust levels using direct reading instruments consistent with previously described methods employed during soil excavation, removal and management activities. The upwind and downwind dust monitoring instruments (i.e., TSI Dustrak™) were zeroed before use and at the end of the day. Data was logged at 60-second intervals, monitored periodically by field personnel during soil treatment activities and the data was downloaded at the end of the day. There were no exceedances of TRC's prescribed action level of 150 ug/m^3 sustained for 15 minutes at the upwind or downwind units during soil treatment activities. The maximum recorded readings from the upwind and downwind units were 0.125 and 0.187 ug/m^3, respectively. The downwind unit exhibited a single spike of 0.187 ug/m^3, however this level was not sustained and represents the only occasion throughout fugitive dust monitoring that the 150

ug/m^3 level was momentarily exceeded. The fugitive dust monitoring data associated with the WFE-5 treatment activities are presented in Appendix C.

Following completion of the treatment process, Triumvirate collected a composite sample of the stockpiled material for post-stabilization TCLP analysis. Sample "Stockpile Composite" was submitted to Alpha Analytical, Incorporated (Alpha) in Westborough, Massachusetts for TCLP lead analysis. The post-stabilization analytical data was received by Triumvirate on July 16, 2009 and indicated a TCLP concentration less than the 0.5 mg/L reporting limit (Table 3). The data package associated with the post-stabilization sampling is presented in Appendix B. The TCLP lead result indicated that the soil was no longer a characteristic hazardous waste and the soil could be immediately transported to an appropriately licensed landfill for reuse.

Offsite Soil Management

On July 20, 2009 TRC oversaw the loading and transportation of the stabilized WFE-5 area soils from the Shawmut Avenue Transfer Station to the Crapo Hill Landfill in New Bedford, Massachusetts. Triumvirate subcontracted Norman's Enterprises to conduct the soil transfer and loading activities, while Triumvirate provided transportation services to the approved disposal facility. A Deere 410E backhoe was used to transfer the stockpiled soil into dual- or tri-axel trucks for offsite transportation and disposal. Following completion of the soil management activities, the backhoe was dry swept and loose soil material was consolidated with the soil for offsite disposal.

TRC conducted real-time field screening of dust levels using direct reading instruments, consistent with previously described methods, during the soil loading activities. The upwind and downwind dust monitoring instruments (i.e., TSI Dustrak™) were zeroed before use and at the end of the day. Data from the upwind unit was logged at 60-second intervals. Due to an oversight during program, the downwind unit was logged at 300-second intervals. Both units were monitored periodically by field personnel during soil treatment activities and the data was downloaded at the end of the day. There were no exceedances of TRC's prescribed action level of 150 ug/m^3 sustained for 15 minutes at the upwind or downwind units during soil treatment activities. The maximum recorded readings from the upwind and downwind units were 0.070 and 0.035 ug/m^3, respectively. The fugitive dust monitoring data associated with the WFE-5 treatment activities are presented in Appendix C.

Two trucks transported four individual loads and a total of 54.44 tons of soil from the Shawmut Avenue Transfer Station to the Crapo Hill Landfill facility in accordance with all United States Department of Transportation (DOT), United States Environmental Protection Agency (EPA) and MassDEP regulations. All soil transportation was conducted by a licensed hauler and was handled under MassDEP BOL documentation (MassDEP Form BWSC-012) pursuant to 310 CMR 30.0034 of the MCP. Copies of the final Bills of Lading are included in Appendix D. Each of the truck bodies was dry swept and loose material was consolidated for disposal following the hauling activities.

(c) Statement of IRA Findings and Conclusions

TRC's March 16, 2009 IH evaluation, included in Appendix A, indicated that the estimated cancer risk for the young child recreational user did not exceed the MCP risk limits for an IH of an excess lifetime cancer risk (ELCR) of 1E-05 because no cancer toxicity values are available for lead. However, the noncarcinogenic hazard quotient of 20 exceeded the MCP hazard quotient of 1. The IH was identified at the Soccer Field area primarily due to the exposure pathway of the ingestion of lead-containing surface soil. The top 3 feet of soil was removed from the WFE-5 area on March 13, 2009. The excavation of the surface soil in the WFE-5 area of Walsh Field, specifically sample location WFE-5A, mitigated the IH condition as all remaining surface soil lead concentrations in this area are below Method 1 standards.

(d) Management of Remediation Waste, Remedial Waste Water, and/or Remedial Additives

On March 13, 2009, approximately 41 cubic yards of lead-contaminated soil was excavated from the WFE-5 area of the Walsh Field complex and transported in lined roll-off containers to City's Transfer Station located at 1103 Shawmut Avenue, New Bedford, Massachusetts for temporary storage prior to offsite disposal. All soils were moved from the Site to the Transfer Station under MassDEP BOLs (see Appendix D). Receipt of waste characterization soil sample results indicated a total concentration of lead greater than 20-times the allowable aqueous lead leachate level. The sample was subsequently analyzed for TCLP lead, and based on the TCLP analysis, the extract from the soil contained a lead concentration of 8.04 mg/L. This concentration exceeds the 5.0 mg/L concentration identified as the regulatory level for lead by MassDEP in 310 CMR 30.125: Table 1 (characteristic hazardous waste). As a result, the soil required lead stabilization treatment. On July 10, 2009 the soil material was removed from the lined roll-off containers and temporarily stockpiled in preparation for stabilization treatment. On July 13, 2009 the soil material was treated with the Free Flow Technologies® FF-200 chemical reagent to bind the lead to the soil. An additional TCLP waste characterization sample was collected to confirm that the chemical reagent had properly inhibited the leaching of lead from the soil. The post-stabilization waste characterization sample exhibited a TCLP concentration less than the 0.5 mg/L reporting limit, indicating that the soil was no longer a characteristic hazardous waste and the soil could be transported to an appropriately licensed landfill for reuse. On July 20, 2009 all soils associated with the WFE-5 IH condition were transported from the Shawmut Avenue Transfer Station to the Crapo Hill Landfill under MassDEP BOLs (see Appendix D).

(e) Ongoing Activities

The objective of this IRA was to assess and delineate the IH condition and to mitigate potential exposure to contaminated surface soils through excavation. This work has been completed. No additional activities relative to this IRA are planned.

(f) Such Other Information that the Department May Deem Appropriate and Necessary

See Appendix A for TRC's Imminent Hazard Evaluation. See Appendix B for the soil sample laboratory data reports. See Appendix C for results of dust monitoring conducted by TRC during

soil handling activities. See Appendix D for copies of Bills of relating to TRC's soil handling activities.

As required by 310 CMR 40.1403(3)(c), the Mayor and the Board of Health for the City of New Bedford have been notified of the availability of this IRA Completion Statement. Copies of the notification letters sent to the Mayor and Board of Health are provided in Appendix E. Pertinent soil boring logs are presented in Appendix F.

Notes:
All units in mg/kg unless otherwise specified.
mg/kg - milligrams per kilogram (dry weight) or parts per million (ppm).
mg/L - milligrams per liter
NA - Sample not analyzed for the listed analyte.
N/A - Not applicable.
U - Compound was not detected at specified quantitation limit.
Values in **Bold** indicate the compound was detected.
Values shown in Bold and shaded type exceed one or more of the listed Method 1 standards or TCLP standard, as applicable.
VOCs - Volatile Organic Compounds.
PAHs - Polynuclear Aromatic Hydrocarbons.
PCBs - Polychlorinated Biphenyls.
RC - Reportable Concentration.
TSCA - Toxic Substances Control Act criteria.
2006 data are based on the "Summary of Analytical Data, Walsh Field" dated June 9, 2006, BETA Group, Inc.
(1) - MassDEP Method 1 standards and RC for C9-C10 aromatics used.
(2) - MassDEP RC for Dichloropropane used.
(3) - MassDEP RC for Dichloropropene used.
(4) - SW-846 Chapter 7, Table 7-1, *Maximum Concentration of Contaminants for Toxicity Characteristic*.

APPENDIX A

IMMINENT HAZARD EVALUATION SUMMARY

IMMINENT HAZARD EVALUATION
SOCCER FIELD SURFACE SOIL
WALSH FIELD
NEW BEDFORD, MASSACHUSETTS

Due to the potential Imminent Hazard (IH) condition that was triggered at the Site on March 4, 2009 for the detection of lead in surface soil (0 to 1 foot in depth) at the WFE-5 area of the Soccer Field area at Walsh Field of New Bedford High School (NBHS), an IH evaluation has been performed. The potential IH condition was discovered during additional investigation to delineate the extent of elevated levels of lead, cadmium and polycyclic aromatic hydrocarbons (PAHs) in soil at the Soccer Field area and to determine the extent of potential soil removal necessary to achieve a condition of no significant risk for the top three feet of soil within this area. The WFE-5 sampling location had been identified as one of three areas requiring further delineation sampling within the Soccer Field area.

The protocol for the delineation sampling called for the collection of four "inner ring" soil samples (0 to 1 foot and 1 to 3 feet in depth) four feet away from the original WFE-5 sampling location to the north, east, south and west (designated "A" through "D"). The protocol further called for the collection of four additional "outer ring" samples eight feet from the original WFE-5 sampling location (designated "E" through "H"). "Outer ring" samples were also collected from the 0 to 1 and 1 to 3 feet intervals. All samples were collected on February 23, 2009 and the "inner ring" samples were authorized for lead, cadmium and PAH analysis. The "outer ring" samples were held at the laboratory, pending the results of the "inner ring" sample analysis.

Cadmium and PAH concentrations in the four "inner ring" surface soil samples were below the Massachusetts Department of Environmental Protection (MassDEP) background concentration for natural soil. Lead concentrations were below the Method 1 S-1/GW-2 and S-1/GW-3 standards (300 mg/kg) at three of the four "inner ring" surface soil locations (WFE-5B through WFE-5D). However, at location WFE-5A, a concentration of 3,360 mg/kg was detected in the 0 to 1 foot interval. Due to the detection of lead at a concentration more than 10-fold the MCP Method 1 S-1 soil cleanup standard and in excess of the MCP Upper Concentration Limit (UCL) at the WFE-5A location, TRC was prompted to perform a preliminary IH analysis as a precaution. TRC determined than an IH condition was present using MassDEP risk characterization protocols. The potential IH condition was reported and the "outer ring" samples were immediately authorized for analysis to determine the extent of the elevated surficial lead.

Lead concentrations in 0 to 1 foot samples WFE-5E through WFE-5H, reported by the laboratory on March 6, 2009, were less than the Method 1 S-1 standard of 300 mg/kg, with a maximum detected concentration of 220 mg/kg. Four additional locations were sampled to the north of WFE-5E at two foot step-out intervals (WFE-5I through WFE-5L) on March 11, 2009, primarily to delineate lead in the 1 to 3 foot interval. However, lead concentrations in the four 0 to1 foot samples were also below Method 1 S-1 standards, confirming that the extent of the surficial lead had been delineated.

This IH evaluation reflects surface soil sampling conducted to date for the Soccer Field area. The surface soil sample results are provided in Table 1. Surface soil contaminants of potential concern (COPCs) were selected for the WFE-5 area by comparing maximum detected concentrations of cadmium, lead and PAHs to MassDEP background concentrations for natural soils. Only lead exceeded its MassDEP background concentration and was selected as a COPC for further evaluation.

Because the maximum detected concentration (3,360 mg/kg) is more than 10-fold greater than the Method 1 S-1 standard, averaging of the 0 to 1 foot lead concentrations from the WFE-5 area is not appropriate. Therefore, the maximum detected concentration or a 95 percent upper confidence limit (95% UCL) on the arithmetic mean concentration may be used as the exposure point concentration to determine whether an IH condition exists at the site. However, due to the variability in the data set, the calculated 95% UCL was greater than the maximum detected concentration. Therefore, the maximum detected concentration was used as the EPC.

The area of concern is the Soccer Field, used for practices and games during the soccer season. The Soccer Field may also be used by other teams as a practice area during the spring and fall sport seasons (e.g., for field hockey practice). Walsh Field, which houses the Soccer Field and other athletic fields, is secured by a fence, limiting access only to those with permission to use the fields. For the purposes of this IH evaluation, exposures are assumed to occur during the sport season which consists of 3 weeks of pre-season practice, the 12-week season, and a 3-week post-season playoff time period. During this 18-week period, exposures are assumed to occur 5 days per week (4 practice days and one game day) for 4 hours per day. These values are conservative because their use assumes that: (1) no time is spent at a different field; (2) no cancellation of practice due to inclement weather; and (3) children are at the field for 4 hours per day, which is likely to only occur on game days since practices are for less than 4 hours each day.

To estimate exposures, a young child (age 1 to 6) was selected for evaluation because this age group may be present at the field, accompanying parents who are spectators at the practices and games. Incidental ingestion of and dermal contact with lead-impacted soils are assumed to occur while the young child plays at the field. The inhalation of fugitive dust generated while the older children practice or play the sport is also considered a complete exposure pathway. Older children engaging in the sport are also exposed, but a young child is evaluated as the most sensitive receptor due to their higher soil intake rate, lower body weight, and sensitive developmental stage.

Exposure assumptions applicable to the young child are provided on the risk calculation spreadsheets (Tables 2 through 5). Exposure assumptions selected for use are consistent with those used by MassDEP in the park visitor IH short-form, adjusted to be applicable to the 18-week exposure period of concern. For the fugitive dust pathway, methods and assumptions consistent with the MassDEP Technical Update "Characterization of Risks Due to Inhalation of Particulates by Construction Workers" (July 2008) were used including a PM_{10} of 60 ug/m^3. Inhalation rates used are age-specific values provided by MassDEP in the 1995 risk assessment guidance document.

The estimated cancer risk for the young child recreational user did not exceed the MCP risk limit for an IH of an excess lifetime cancer risk (ELCR) of 1E-05 because no cancer toxicity values are available for lead. However, the Hazard Quotient of 20 exceeds the MCP IH limit of 1 for lead. The IH is identified at the WFE-5 area of the Soccer Field primarily due to the ingestion of lead-containing surface soil. However, the excavation of surface soil in the vicinity of WFE-5A would mitigate the IH condition since all remaining surface soil lead concentrations in this area are below the Method 1 standards. The excavation was conducted on March 13, 2009 and an IH condition no longer exists at the Soccer Field area in the vicinity of WFE5.

CASE NARRATIVE SUMMARY

Recommended sample holding times were not exceeded for all samples unless listed below:
None Exceeded

All samples for the method(s) listed were received preserved properly in the proper containers at 4°C +/- 2 degrees as specified on the chain-of-custody form unless listed below:
All properly preserved

There are no analytical issues which affect the usebility of the data.

DETAILED CASE NARRATIVE

METHOD SW846-6010 - ADDITIONAL DETAILS

MS performed on sample 09B09717. Only Pb was requested and reported.
The ms recovery is outside control limits for Pb. Sample to spike ratio is >4:1, therefore a representative recovery may not be obtainable.

The results of analyses performed are based on samples as submitted to the laboratory and relate only to the items collected and tested.

The CON-TEST Environmental Laboratory operates under the following certifications and accreditations. AIHA accreditations only apply to NIOSH methods and Environmental Lead Analyses.

AIHA 100033	AIHA ELLAP (LEAD) 100033	NORTH CAROLINA CERT. # 652
MASSACHUSETTS MA0100	NEW HAMPSHIRE NELAP 2516	NEW JERSEY NELAP NJ MA007 (AIR)
CONNECTICUT PH-0567	VERMONT DOH (LEAD) No. LL015036	FLORIDA DOH E871027 (AIR)
NEW YORK ELAP/NELAP 10899	RHODE ISLAND (LIC. No. 112)	

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

QC SUMMARY REPORT

SAMPLE QC: Sample Results with Duplicates
Sample Matrix Spikes and Matrix Spike Duplicates

BATCH QC: Lab fortified Blanks and Duplicates
Standard Reference Materials and Duplicates
Method Blanks

QUALITY CONTROL DEFINITIONS AND ABBREVIATIONS

QC BATCH NUMBER	This is the number assigned to all samples analyzed together that would be subject to comparison with a particular set of Quality Control Data.
LIMITS	Upper and Lower Control Limits for the QC ANALYSIS Reported. All values normally would fall within these statistically determined limits, unless there is an unusual circumstance that would be documented in a NOTE appearing on the last page of the QC SUMMARY REPORT. Not all QC results will have Limits defined.
Sample Amount	Amount of analyte found in a sample.
Blank	Method Blank that has been taken though all the steps of the analysis.
LFBLANK	Laboratory Fortified Blank (a control sample)
STDADD	Standard Added (a laboratory control sample)
Matrix Spk Amt Added	Amount of analyte spiked into a sample
MS Amt Measured	Amount of analyte found including amount that was spiked
Matrix Spike % Rec.	% Recovery of spiked amount in sample.
Duplicate Value	The result from the Duplicate analysis of the sample.
Duplicate RPD	The Relative Percent Difference between two Duplicate Analyses.
Surrogate Recovery	The % Recovery for non-environmental compounds (surrogates) spiked into samples to determine the performance of the analytical methods.
Sur. Recovery (ELCD)	Surrogate Recovery on the Electrolytic Conductivity Detector.
Sur. Recovery (PID)	Surrogate Recovery on the Photoionization Detector.
Standard Measured	Amount measured for a laboratory control sample
Standard Amt Added	Known value for a laboratory control sample
Standard % Recovery	% recovered for a laboratory control sample with a known value.
Lab Fort Blank Amt	Laboratory Fortified Blank Amount Added
Lab Fort Blk. Found	Laboratory Fortified Blank Amount Found
Lab Fort Blk % Rec	Laboratory Fortified Blank % Recovered
Dup Lab Fort Bl Amt	Duplicate Laboratory Fortified Blank Amount Added
Dup Lab Fort Bl Fnd	Duplicate Laboratory Fortified Blank Amount Found
Dup Lab Fort Bl % Rec	Duplicate Laboratory Fortified Blank % Recovery
Lab Fort Blank Range	Laboratory Fortified Blank Range (Absolute value of difference between recoveries for Lab Fortified Blank and Lab Fortified Blank Duplicate).
Lab Fort Bl. Av. Rec.	Laboratory Fortified Blank Average Recovery
Duplicate Sample Amt	Sample Value for Duplicate used with Matrix Spike Duplicate
MSD Amount Added	Matrix Spike Duplicate Amount Added (Spiked)
MSD Amt Measured	Matrix Spike Duplicate Amount Measured
MSD % Recovery	Matrix Spike Duplicate % Recovery
MSD Range	Absolute difference between Matrix Spike and Matrix Spike Duplicate Recoveries

MADEP MCP Analytical Method Report Certification Form

Laboratory Name: **CON-TEST Analytical Laboratory**	Project #: LIMT- 24337
Project Location: New Bedford	MADEP RTN[1]:

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]

09B09717

Sample Matrices: ☐ Groundwater ☒ Soil/Sediment ☐ Drinking Water ☐ Other: _____

MCP SW-846 Methods Used	8260B ( )	8151A ( )	8330 ( )	6010B ☒	7470A/1A ( )

3 S – SW-846 Methods 7000 Series List individual method and analyte.

An affirmative response to questions A, B, C and D is required for "Presumptive Certainty" status

A	Were all samples received by the laboratory in a condition consistent with that described on the Chain-of-Custody documentation for the data set?	☒ Yes ☐ No[1]
B	Were all QA/QC procedures required for the specified analytical method(s) included in this report followed, including the requirement to note and discuss in a narrative QC data that did not meet appropriate performance standards or guidelines?	☒ Yes ☐ No[1]
C	Does the data included in this report meet all the analytical requirements for "Presumptive Certainty", as described in Section 2.0 (a), (b), (c) and (d) of the MADEP document CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☒ Yes ☐ No[1]
D	***VPH and EPH Methods only***: Was the VPH or EPH Method conducted without significant modifications (see Section 11.3 of respective Methods)	☐ Yes ☐ No [1]

A response to questions E and F below is required for "Presumptive Certainty" status

E	Were all analytical QC performance standards and recommendations for the specified methods achieved?	☒ Yes ☐ No[1]
F	Were results for all analyte-list compounds/elements for the specified method(s) reported?	☐ Yes ☒ No[1]

[1] *All Negative responses must be addressed in an attached Environmental Laboratory case narrative.*

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

Report Submission

At the client's request, all analyses were cancelled, with the exception of TCLP Lead.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Michelle M. Morris

GLOSSARY

Acronyms

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

ND - Not detected at the reported detection limit for the sample.

NI - Not Ignitable.

RDL - Reported Detection Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

* - The batch duplicate RPD exceeds the acceptance criteria. This flag is not applicable when the sample concentrations are less than 5x the RDL. (Metals only.)

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

N - The matrix spike recovery exceeds the acceptance criteria. This flag is not applicable when the sample concentration is greater than 4x the spike added. (Metals only.)

P - The RPD between the results for the two columns exceeds the method-specified criteria.

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Woods Hole Labs shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Woods Hole Labs.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised July 7, 2009 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574. ***NELAP Accredited Solid Waste/Soil.***

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Haloacetic Acids, Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP), Ethylene Dibromide (EDB).)
Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Calcium Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)
Solid Waste/Soil (Inorganic Parameters: Lead in Paint, pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), Reactivity. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Extractable Petroleum Hydrocarbons (ETPH), Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Volatile Organics, Acid Extractables (Phenols), 3.3'-Dichlorobenzidine, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

Maine Department of Human Services Certificate/Lab ID: 2009024.
Drinking Water (Inorganic Parameters: SM9215B, 9221E, 9222B, 9222D, 9223B, EPA 150.1, 180.1, 300.0, 353.2, SM2130B, 2320B, 4500Cl-D, 4500CN-C, 4500CN-E, 4500F-C, 4500H+B,4500NO3-F, EPA 200.7, EPA 200.8, 245.1. Organic Parameters: 504.1, 524.2, SM 6251B.)
Wastewater/Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 350.1, 351.1, 353.2, 410.4, 420.1, Lachat 10-107-06-1-B, SM2320B, 2340B, 2510B, 2540C, 2540D, 426C, 4500Cl-D, 4500Cl-E, 4500CN-C, 4500CN-E, 4500F-B, 4500F-C, 4500H+B, 4500Norg-B, 4500Norg-C, 4500NH3-B, 4500NH3-G, 4500NH3-H, 4500NO3-F, 4500P-B.5, 4500P-E, 5210B, 5220D, 5310C, EPA 200.7, 200.8, 245.1. Organic Parameters: 608, 624.)

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.
Drinking Water
Inorganic Parameters: (EPA 200.8 for: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl)
(EPA 200.7 for: Ba,Be,Ca,Cd,Cr,Cu,Na,Ni) 245.1, (300.0 for: Nitrate-N, Nitrite-N, Fluoride, Sulfate)
353.2 for: Nitrate-N, Nitrite-N; SM4500NO3-F, 4500F-C, 4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, 2320B, SM2540C, EPA 150.1, SM4500H-B.
Organic Parameters: (EPA 524.2 for: Trihalomethanes, Volatile Organics)
(504.1 for: 1,2-Dibromoethane, 1,2-Dibromo-3-Chloropropane), SM6251B, 314.0.

Non-Potable Water
Inorganic Parameters:, (EPA 200.8 for: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn)
(EPA 200.7 for: Al,Sb,As,Be,Cd,Cr,Co,Cu,Fe,Pb,Mn,Mo,Ni,Se,Ag,Sr,Tl,Ti,V,Zn,Ca,Mg,Na,K)
245.1, SM4500H,B, EPA 120.1, SM2510B, 2540C, 2540B, 2320B, 4500CL-E, 4500F-BC, 426C, SM4500NH3-BH, (EPA 350.1 for: Ammonia-N), LACHAT 10-107-06-1-B for Nitrate-N, SM4500NO3-F, 353.2 for Nitrate-N, SM4500NH3-B,C-Titr, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, 4500P-B,E, 5220D, EPA 410.4, SM 5210B, 5310C, 4500CN-CE, 2540D, 4500CL-D, EPA 1664, SM14 510AC, EPA 420.1
Organic Parameters: (EPA 624 for Volatile Halocarbons, Volatile Aromatics)
(608 for: Chlordane, Aldrin, Dieldrin, DDD, DDE, DDT, Heptachlor, Heptachlor Epoxide, PCB-Water)
600/4-81-045-PCB-Oil

Dust Monitoring Data - Upwind Unit
(July 13, 2009)

TrakPro Version 4.10 ASCII Data File

Model:	Dust Trak
Model Number:	8520
Serial Number:	85200311
Test ID:	1
Test Abbreviation:	DW
Start Date:	7/13/2009
Start Time:	8:29:10
Duration (dd:hh:mm:ss):	0:06:SS:00
Time constant (seconds):	10
Log Interval (mm:ss):	1:00
Number of points:	415
Notes:	

Statistics	Channel:	Aerosol
	Units:	mg/m^3
	Average:	0
	Minimum:	-0.003
	Time of Minimum:	10:36:10
	Date of Minimum:	7/13/2009
	Maximum:	0.125
	Time of Maximum:	8:37:10
	Date of Maximum:	7/13/2009
Calibration	Sensor:	Aerosol
	Cal. date	4/2/2009

Dust Monitoring Data - Downwind Unit
(July 13, 2009)

TrakPro Version 4.10 ASCII Data File

Model:	Dust Trak
Model Number:	8520
Serial Number:	85200990
Test ID:	1
Test Abbreviation:	UW
Start Date:	7/13/2009
Start Time:	8:24:44
Duration (dd:hh:mm:ss):	0:07:01:00
Time constant (seconds):	10
Log Interval (mm:ss):	1:00
Number of points:	421
Notes:	

Statistics	Channel:	Aerosol
	Units:	mg/m^3
	Average:	0.004
	Minimum:	-0.003
	Time of Minimum:	8:29:44
	Date of Minimum:	7/13/2009
	Maximum:	0.187
	Time of Maximum:	10:44:44
	Date of Maximum:	7/13/2009
Calibration	Sensor:	Aerosol

APPENDIX D

BILL OF LADING FORMS

Massachusetts Department of Environmental Protection
Bureau of Waste Site Cleanup

BWSC-012A

BILL OF LADING (pursuant to 310 CMR 40.0030)

Release Tracking Number*: 4 - 21823

A. LOCATION OF SITE OR DISPOSAL SITE WHERE REMEDIATION WASTE WAS GENERATED:

Release Name (optional): Walsh Field

Street: Parker and Hunter Streets Location Aid: Soccer Field

City/Town: New Bedford ZIP Code: 02740

Date/Period of Generation: _____ to: _____

Additional Release Tracking Numbers Associated with this Bill of Lading: _____

**Note: If this Bill of Lading is the result of a Limited Removal Action (LRA) taken prior to Notification, a Release Tracking Number is not needed.*

B. PERSON CONDUCTING RESPONSE ACTION ASSOCIATED WITH BILL OF LADING:

Name of Organization: City of New Bedford

Name of Contact: Scott Alfonse Title: Director, Dept. of Env. Stew.

Street: 133 William Street

City/Town: New Bedford State: MA ZIP Code: 02740

Telephone: (508) 979-1487 Ext.: _____

C. RELATIONSHIP TO RELEASE OF PERSON CONDUCTING RESPONSE ACTION ASSOCIATED WITH BILL OF LADING:

☑ RP or PRP Specify: ☐ Owner ☐ Operator ☐ Generator ☐ Transporter Other RP or PRP: Municipality

☐ Fiduciary, Secured Lender or Municipality with Exempt Status (as defined by M.G.L. c. 21E, s. 2)

☐ Agency or Public Utility on a Right of Way (as defined by M.G.L. c. 21E, s. 5(j))

☐ Other Person: _____

If an owner and/or operator is not conducting the response action associated with the Bill of Lading, provide on an attachment the name, contact person, address and telephone number, including any area code and extension, for each, if known.

D. TRANSPORTER OR COMMON CARRIER INFORMATION:

Transporter/Common Carrier Name: D.W. White/City of New Bedford

Contact Person: M. White/R. Labelle Title: Owner/Commissioner

Street: 867 Middle Road/1105 Shawmut Avenue

City/Town: Acushnet/New Bedford State: MA ZIP Code: 02743/02746

Telephone: (508) 951-9604 Ext.: _____

E. RECEIVING FACILITY/TEMPORARY STORAGE LOCATION:

Operator/Facility Name: City of New Bedford/Shawmut Avenue Transfer Station

Contact Person: Ronald LaBelle Title: Commissioner

Street: Shawmut Avenue

City/Town: New Bedford State: MA ZIP Code: 02746

Telephone: 508-979-1556 Ext.: _____

Type of Facility (check one):
☐ Asphalt Batch/Cold Mix ☐ Asphalt Batch/Hot Mix ☐ Thermal Processing
☐ Landfill/Disposal ☐ Landfill/Daily Cover ☐ Landfill/Structural Fill
☐ Incinerator ☑ Temporary Storage ☐ Other: _____

EPA Identification #: _____

Division of Hazardous Waste/Class A Permit #: _____ Division of Solid Waste Management Permit #: _____

Actual/Anticipated Period of Temporary Storage (specify dates if applicable): <120 days to: _____

Reason for Temporary Storage:
Awaiting offsite reuse, recycling and/or disposal facility approval.

Sample Matrix: SOIL

	Units	Results	Date Analyzed	Analyst	RL	SPEC Limit Lo	SPEC Limit Hi	P/ F
Lead	mg/kg dry wt	239	03/12/09	OP	1.06			

Analytical Method:
SW846 3050/6010
SAMPLES ARE DIGESTED WITH NITRIC ACID AND THEN ANALYZED BY INDUCTIVELY COUPLED PLASMA EMISSION SPECTROSCOPY.

RL = Reporting Limit
ND = Not Detected at or above the Reporting Limit
NM = Not Measured
* = See end of report for comments and notes applying to this sample
‡ = See attached chain-of-custody record for time sampled

SPEC LIMIT = a client specified recommended or regulatory level for comparison with data to determine PASS (P) or FAIL (F) condition of results.

BILL OF LADING (pursuant to 310 CMR 40.0030)

A. LOCATION OF SITE OR DISPOSAL SITE WHERE REMEDIATION WASTE WAS GENERATED:

Release Name (optional): Walsh Field - WFE-5 (Soccer Field Area)

Street: 230 Hathaway Boulevard Location Aid: New Bedford High School

City/Town: New Bedford ZIP Code: 02740

Date/Period of Generation: 3/2/09 to: present

Additional Release Tracking Numbers Associated with this Bill of Lading:

**Note: If this Bill of Lading is the result of a Limited Removal Action (LRA) taken prior to Notification, a Release Tracking Number is not needed.*

B. PERSON CONDUCTING RESPONSE ACTION ASSOCIATED WITH BILL OF LADING:

Name of Organization: City of New Bedford

Name of Contact: David Fredette Title: Environmental Planner

Street: 133 William Street, Room 304

City/Town: New Beford State: MA ZIP Code: 02740

Telephone: (508) 961-4576 Ext.:

C. RELATIONSHIP TO RELEASE OF PERSON CONDUCTING RESPONSE ACTION ASSOCIATED WITH BILL OF LADING:

☑ RP or PRP Specify: ☑ Owner ☐ Operator ☑ Generator ☐ Transporter Other RP or PRP:

☐ Fiduciary, Secured Lender or Municipality with Exempt Status (as defined by M.G.L. c. 21E, s. 2)

☐ Agency or Public Utility on a Right of Way (as defined by M.G.L. c. 21E, s. 5(j))

☐ Other Person:

If an owner and/or operator is not conducting the response action associated with the Bill of Lading, provide on an attachment the name, contact person, address and telephone number, including any area code and extension, for each, if known.

D. TRANSPORTER OR COMMON CARRIER INFORMATION:

Transporter/Common Carrier Name: Norman's Enterprises Construction Corp

Contact Person: Norman Fredette Title: Owner

Street: 16 Rene Street

City/Town: Acushnet State: MA ZIP Code: 02743

Telephone: Ext.:

E. RECEIVING FACILITY/TEMPORARY STORAGE LOCATION:

Operator/Facility Name: Greater New Bedford Regional Refuse Management District (Crapo Hill Landfi

Contact Person: Hank Van Laarhoven Title: Director of Operations

Street: 300 Samuel Barnet Blvd

City/Town: New Bedford State: mA ZIP Code: 02745

Telephone: 508 763 5924 Ext.:

Type of Facility (check one):
☐ Asphalt Batch/Cold Mix ☐ Landfill/Disposal ☐ Incinerator ☐ Temporary Storage
☐ Asphalt Batch/Hot Mix ☑ Landfill/Daily Cover ☐ Other:
☐ Thermal Processing ☐ Landfill/Structural Fill EPA Identification #:

Division of Hazardous Waste/Class A Permit #: Division of Solid Waste Management Permit #: 93537

Actual/Anticipated Period of Temporary Storage (specify dates if applicable): 3/30/09 to: 7/24/09

Reason for Temporary Storage:
Transported to transfer facility for lead stabilization

Massachusetts Department of Environmental Protection
Bureau of Waste Site Cleanup

BILL OF LADING (pursuant to 310 CMR 40.0030)

Release Tracking Number*: 4 - 21823

E. RECEIVING FACILITY/TEMPORARY STORAGE LOCATION (continued):

Temporary Storage Address:

Street: 1103 Shawmut Ave (transfer station)

City/Town: New Bedford State: MA ZIP Code:

F. DESCRIPTION OF REMEDIATION WASTE:
(check all that apply)

☑ Contaminated Media (check all that apply): ☑ Soil ○ Groundwater ○ Surface Water ☑ Other:

☑ Contaminated Debris (check all that apply): ○ Vegetation or Organic Debris ○ Demolition/Construction Waste
○ Inorganic Absorbant Materials ☑ Other: Poly Sheeting

☐ Non-hazardous Uncontainerized Waste (check all that apply): ○ Non-aqueous Phase Liquid ○ Other:

☐ Non-hazardous Containerized Waste (check all that apply): ○ Tank Bottoms/Sludges ○ Containers ○ Drums
○ Engineered Impoundments ○ Other:

Type of Contamination (check all that apply): ☐ Gasoline ☐ Diesel Fuel ☐ #2 Oil ☐ #4 Oil ☐ #6 Oil ☐ Waste Oil
☐ Kerosene ☐ Jet Fuel ☑ Other: Lead, Stabilized

Estimated Volume of Materials: Cubic Yards: 50 Tons: 100 Other:

Contaminant Source (check one/specify): ☐ Transportation Accident ☐ Underground Storage Tank ☑ Other

Response Action Associated with Bill of Lading (check one): ☑ Immediate Response Action ☐ Release Abatement Measure

☐ Utility-Related Abatement Measure ☐ Limited Removal Action ☐ Comprehensive Response Action ☐ Other

Remediation Waste Characterization Support Documentation attached:

☑ Site History Information ☐ Sampling and Analytical Methods and Procedures ☑ Laboratory Data ☐ Field Screening Data

If supporting documentation is not appended, provide an attachment stating thedate and in connection with what document such information was previously submitted to DEP.

G. LICENSED SITE PROFESSIONAL (LSP) OPINION:

Name of Organization: TRC Environmental Corporation

LSP Name: David M. Sullivan Title: Sr. Project Manager

Telephone: 978-656-3565 Ext.:

I attest under the pains and penalties of perjury that I have personally examined and am familiar with this submittal, including any and all documents accompanying this submittal. In my professional opinion and judgment based upon application of

(i) the standard of care in 309 CMR 4.02(1),
(ii) the applicable provisions of 309 CMR 4.02(2) and (3), and
(iii) the provisions of 309 CMR 4.03(5),

to the best of my knowledge, information and belief, the assessment actions undertaken to characterize the Remediation Waste which is (are) the subject of this submittal for acceptance at the facility identified in this submittal comply with the applicable provisions of 310 CMR 40.0000, and such facility is permitted to accept Remediation Waste having the characteristics described in this submittal. I am aware that significant penalties may result, including, but not limited to, possible fines and imprisonment, if I submit information which I know to be false, inaccurate or materially incomplete.

CASE NARRATIVE SUMMARY

Recommended sample holding times were not exceeded for all samples unless listed below:
None Exceeded

All samples for the method(s) listed were received preserved properly in the proper containers at 4°C +/- 2 degrees as specified on the chain-of-custody form unless listed below:
All properly preserved

There are no analytical issues which affect the usability of the data.

DETAILED CASE NARRATIVE

METHOD SW846-6010 - ADDITIONAL DETAILS

MS performed on sample 09B09717. Only Pb was requested and reported.
The ms recovery is outside control limits for Pb. Sample to spike ratio is >4:1, therefore a representative recovery may not be obtainable.

The results of analyses performed are based on samples as submitted to the laboratory and relate only to the items collected and tested.

The CON-TEST Environmental Laboratory operates under the following certifications and accreditations. AIHA accreditations only apply to NIOSH methods and Environmental Lead Analyses.

AIHA 100033	AIHA ELLAP (LEAD) 100033	NORTH CAROLINA CERT. # 652
MASSACHUSETTS MA0100	NEW HAMPSHIRE NELAP 2516	NEW JERSEY NELAP NJ MA007 (AIR)
CONNECTICUT PH-0567	VERMONT DOH (LEAO) No. LL015036	FLORIDA DOH E871027 (AIR)
NEW YORK ELAP/NELAP 10899	RHODE ISLAND (LIC. No. 112)	

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

QC SUMMARY REPORT

SAMPLE QC: Sample Results with Duplicates
Sample Matrix Spikes and Matrix Spike Duplicates

BATCH QC: Leb fortified Blanks and Duplicates
Standard Reference Materials and Duplicates
Method Blanks

QUALITY CONTROL DEFINITIONS AND ABBREVIATIONS

QC BATCH NUMBER	This is the number assigned to all samples analyzed together that would be subject to comparison with a particular set of Quality Control Data.
LIMITS	Upper and Lower Control Limits for the QC ANALYSIS Reported. All values normally would fall within these statistically determined limits, unless there is an unusual circumstance that would be documented in a NOTE appearing on the last page of the QC SUMMARY REPORT. Not all QC results will have Limits defined.
Sample Amount	Amount of analyte found in a sample.
Blank	Method Blank that has been taken though all the steps of the analysis.
LFBLANK	Laboratory Fortified Blank (a control sample)
STDADD	Standard Added (a laboratory control sample)
Matrix Spk Amt Added	Amount of analyte spiked into a sample
MS Amt Measured	Amount of analyte found including amount that was spiked
Matrix Spike % Rec.	% Recovery of spiked amount in sample.
Duplicate Value	The result from the Duplicate analysis of the sample.
Duplicate RPD	The Relative Percent Difference between two Duplicate Analyses.
Surrogate Recovery	The % Recovery for non-environmental compounds (surrogates) spiked into samples to determine the performance of the analytical methods.
Sur. Recovery (ELCD)	Surrogate Recovery on the Electrolytic Conductivity Detector.
Sur. Recovery (PID)	Surrogate Recovery on the Photoionization Detector.
Standard Measured	Amount measured for a laboratory control sample
Standard Amt Added	Known value for a laboratory control sample
Standard % Recovery	% recovered for a laboratory control sample with a known value.
Lab Fort Blank Amt	Laboratory Fortified Blank Amount Added
Lab Fort Blk. Found	Laboratory Fortified Blank Amount Found
Lab Fort Blk % Rec	Laboratory Fortified Blank % Recovered
Dup Lab Fort Bl Amt	Duplicate Laboratory Fortified Blank Amount Added
Dup Lab Fort Bl Fnd	Duplicate Laboratory Fortified Blank Amount Found
Dup Lab Fort Bl % Rec	Duplicate Laboratory Fortified Blank % Recovery
Lab Fort Blank Range	Laboratory Fortified Blank Range (Absolute value of difference between recoveries for Lab Fortified Blank and Lab Fortified Blank Duplicate).
Lab Fort Bl. Av. Rec.	Laboratory Fortified Blank Average Recovery
Duplicate Sample Amt	Sample Value for Duplicate used with Matrix Spike Duplicate
MSD Amount Added	Matrix Spike Duplicate Amount Added (Spiked)
MSD Amt Measured	Matrix Spike Duplicate Amount Measured
MSD % Recovery	Matrix Spike Duplicate % Recovery
MSD Range	Absolute difference between Matrix Spike and Matrix Spike Duplicate Recoveries

MADEP MCP Analytical Method Report Certification Form

Laboratory Name: **CON-TEST Analytical Laboratory**	Project #: LIMT- 24337
Project Location: New Bedford	MADEP RTN[1]:

This Form provides certifications for the following data set: [list Laboratory Sample ID Number(s)]

0980971 7

Sample Matrices: ☐ Groundwater ☒ Soil/Sediment ☐ Drinking Water ☐ Other: _____

MCP SW-846 Methods Used	8260B ( )	8151A ( )	8330 ( )	6010B (X)	7470A/1A ( )
	8270C ( )	8081A ( )	VPH ( )	6020 ( )	9014M[2] ( )
As specified in MADEP Compendium of Analytical Methods. (check all that apply)	8082 ( )	8021B ( )	EPH ( )	7000 S[3] ( )	7196A ( )

1 List Release Tracking Number (RTN), if known
2 M – SW-846 Method 9014 or MADEP Physiologically Available Cyanide (PAC) Method
3 S – SW-846 Methods 7000 Series List individual method and analyte.

An affirmative response to questions A, B, C and D is required for "Presumptive Certainty" status

A	Were all samples received by the laboratory in a condition consistent with that described on the Chain-of-Custody documentation for the data set?	☒ Yes ☐ No[1]
B	Were all QA/QC procedures required for the specified analytical method(s) included in this report followed, including the requirement to note and discuss in a narrative QC data that did not meet appropriate performance standards or guidelines?	☒ Yes ☐ No[1]
C	Does the data included in this report meet all the analytical requirements for "Presumptive Certainty", as described in Section 2.0 (a), (b), (c) and (d) of the MADEP document CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	☒ Yes ☐ No[1]
D	***VPH and EPH Methods only***: Was the VPH or EPH Method conducted without significant modifications (see Section 11.3 of respective Methods)	☐ Yes ☐ No[1]

A response to questions E and F below is required for "Presumptive Certainty" status

E	Were all analytical QC performance standards and recommendations for the specified methods achieved?	☒ Yes ☐ No[1]
F	Were results for all analyte-list compounds/elements for the specified method(s) reported?	☐ Yes ☒ No[1]

[1] *All Negative responses must be addressed in an attached Environmental Laboratory case narrative.*

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

Subject: Another Hold/Expedite

Theresa:

I lost track of this one.

I need TCLP lead.

Please see what you can do to get this in a hurry.

Thanks,

-Dave

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

Report Submission

At the client's request, all analyses were cancelled, with the exception of TCLP Lead.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Michelle M. Morris

GLOSSARY

Acronyms

EPA - Environmental Protection Ageney.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

ND - Not detected at the reported detection limit for the sample.

NI - Not Ignitable.

RDL - Reported Detection Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

* - The batch duplicate RPD exceeds the acceptance criteria. This flag is not applicable when the sample concentrations are less than 5x the RDL. (Metals only.)

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

N - The matrix spike recovery exceeds the acceptance criteria. This flag is not applicable when the sample concentration is greater than 4x the spike added. (Metals only.)

P - The RPD between the results for the two columns exceeds the method-specified criteria.

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Woods Hole Labs shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Woods Hole Labs.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised July 7, 2009 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574. ***NELAP Accredited Solid Waste/Soil.***

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Haloacetic Acids, Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP), Ethylene Dibromide (EDB).)
Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Calcium Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)
Solid Waste/Soil (Inorganic Parameters: Lead in Paint, pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), Reactivity. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Extractable Petroleum Hydrocarbons (ETPH), Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Volatile Organics, Acid Extractables (Phenols), 3.3'-Dichlorobenzidine, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

RE: Notice of Immediate Response Action Completion Report and Imminent Hazard Evaluation – Soccer Field Soil Removal
Dr. Paul F. Walsh Memorial Field
New Bedford, Massachusetts
Release Tracking Number 4-21823

Ms. Mayor Lang:

On behalf of the City of New Bedford, Massaehusetts, and pursuant to 310 CMR 40.1403(3)(e) of the Massachusetts Contingency Plan (MCP), TRC Environmental Corporation (TRC) has prepared this letter to inform you of the submittal of an Immediate Response Action Completion Report pertaining to soils eontaining lead at Walsh Field in New Bedford, Massachusetts. This submittal will be made to the Massaehusetts Department of Environmental Protection (MassDEP) by August 18, 2009.

The IRA performed at WFE-5 eliminated the Imminent Hazard, which was primarily associated with high coneentrations of lead in the top 1 foot of soil. Please see Seetion II of the IRA Completion Report for additional details.

A copy of this document can be obtained from David Fredette in the Department of Environmental Stewardship. If you have any questions concerning this letter please contact me at (978) 656-3565.

Sincerely,
TRC Environmental Corporation
